

## Style Guide

**Required:** Sublime Text and Package Control

**Description:** We will abide by the enforced Sublime Linter and Pylint packages for cleaner and quality code. Except, we will ignore the following warning:

- We will ignore warnings about programming style
  - Example: Errors like “you can change this boolean expression to ...” will be ignored.
- We will also abide by the original GrepThink style guide for consistency sake.
  - Documentation for this can be accessed in the repository under documents
  - We will also continue to copy the code naming convention for the existing code
